

Discover the unmatched versatility of the

TRUXOR T50

Total Length - Max. 5030mm, Min. 4700mm

Weight - 1470kg

Hydraulic Power - 26 kW/35hk

Battery - 12V/150 Amp, 60 ah battery

Torque - Max torque 185 Nm

Driving Speed - 0-100m/min

Spill Safety - Environmentally friendly system

Diesel Tank - 35l diesel tank

The Truxor T50 stands as the most powerful within the T-Series, boasting a robust engine and hydraulic system. This exceptional machinery guarantees unparalleled performance and operational reliability, enabling us to deliver outstanding results.

The capabilities:

Water plant removal: Safeguarding ecosystem balance and preventing eutrophication.

One of the key applications of the Truxor T50 at JPR is the efficient and effective removal of water plants. We understand the importance of proper water plant management in maintaining the health and balance of aquatic ecosystems. By utilising the T50, we can swiftly and meticulously cut and remove water plants, preventing the accumulation of organic matter that can lead to eutrophication.

Revitalising water bodies: vegetation management and restoration. The Truxor T50 also allows us to undertake comprehensive vegetation management and restoration projects. Whether it's tackling overgrown vegetation, combating invasive plant species, or restoring aquatic habitats, this formidable machine rises to the challenge. With its robust engine and specialised attachments, we can navigate through diverse water bodies.

Weed cutting:

JPR Environmental utilises the T50's power to conduct weed cutting on and beneath the water's surface. Lakes, ponds, and canals are the targets for the T50. We employ this remarkable machine to efficiently remove unwanted aquatic vegetation, ensuring the aesthetics, functionality, and overall health of water bodies.

At JPR, we are deeply committed to environmental sustainability. The utilisation of the Truxor T50 aligns perfectly with our values, as its advanced technology and operational efficiency minimise fuel consumption and noise levels. By combining this cutting edge equipment with our expert knowledge and dedication to responsible practises, we strive to leave a positive impact on the environment and the communities we serve.

JPR contracting

About the Company:

JPR Contracting is an ecological contractor that specialises in wetland landscaping, habitat creation, enhancement, protected species mitigation and more.

We work with wildlife trusts, local authorities, developers, ecologists – anything with an environmental or ecological element that enhances the environment and benefits wildlife.
